0002-1630-408	10	N/A		5 ft White	5 ft Orange	White	6

These tower sections are replacement sections for the new style GS towers that are used with an OSHA compliant ladder (without welded in steps). These tower sections are 36 inch face, triangular, fully welded sections with square four bolt hole flanges. These sections are galvanized then painted with a high quality epoxy primer and polyurethane top coat paint. They are also available powder coated. If a complete tower kit is wanted the new style tower kits with the OSHA approved ladder should be used. Please contact Antenna Products Corp for further assistance.
