0002-1630-406	20	5 ft Orange	5 ft White	5 ft Orange	5 ft White	White	6

These tower sections are replacement sections for the older style GS towers that were manufactured with welded in ladder steps. These tower sections are 36 inch face, triangular, fully welded sections with square four bolt hole flanges. These sections are galvanized then painted with a high quality epoxy primer and polyurethane top coat paint. They are also available powder coated. If a complete tower kit is wanted the new style tower kits with the OSHA approved ladder should be used. Please contact Antenna Products Corp for further assistance.
